

10.0 mm (4.8 ") 5 × 8 Blue
Dot Matrix LED Displays
Technical Data Sheet

Model No.: KWM-100581XBB

Features:

- 4.8"inch(121.5mm) digit height.
- Colors: Blue.
- Flat package and light weight.
- Easy assembly.
- High quality and low cost.
- High reliable and intensity.
- Low power requirement.
- The product itself will remain within RoHS compliant version.

Descriptions:

The KWM-100581 series is a large emitting area (10.0mm diameter) LED sources configured in a 40 dots 5×8 matrix array.
 These displays provide excellent reliability in bright ambient light.
 These devices are made with white dots and black surface.

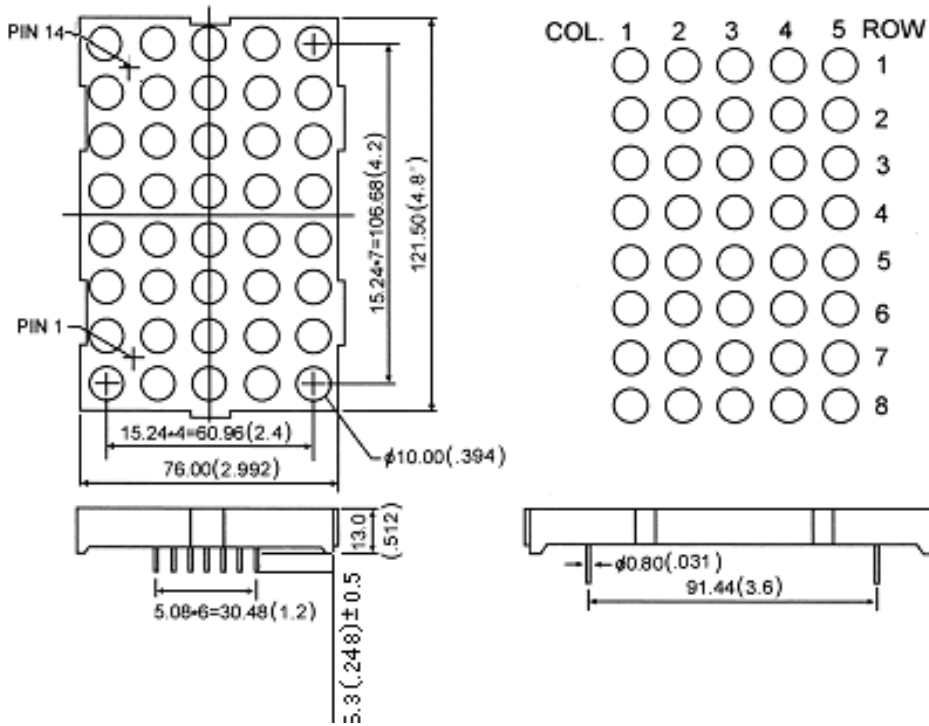

Applications:

- Audio equipment.
- Instrument panels.
- Digital read out display.

Device Selection Guide:

Model No.	Chip Material	Face Color	Description
KWM-100581ABB	InGaN	Black	Row Anode
KWM-100581CBB		Black	Row Cathode

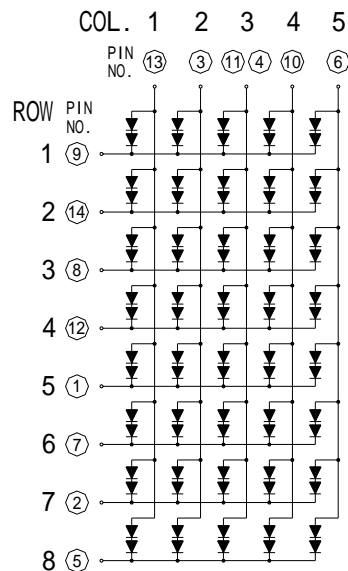

Package Dimension:

KWM-100581ABB

KWM-100581CBB

Notes:

1. All dimensions are in millimeters (inches).
2. Tolerance is ± 0.25 (.010") mm unless otherwise noted.
3. Specifications are subject to change without notice.

Absolute Maximum Ratings at Ta=25

Parameters	Symbol	Max.	Unit
Power Dissipation Per Segment	PD	200	mW
Peak Forward Current Per Segment (1/10 Duty Cycle, 0.1ms Pulse Width)	IFP	100	mA
Forward Current Per Segment	IF	25	mA
Dating Linear From 50		0.4	mA/
Reverse Voltage	VR	5	V
Operating Temperature Range	Topr	-40 to +80	
Storage Temperature Range	Tstg	-40 to +85	
Soldering Temperature	Tsld	260 for 5 Seconds	

Electrical Optical Characteristics at Ta=25

Parameters	Symbol	Min.	Typ.	Max.	Unit	Test Condition
Luminous Intensity	Iv	20.0	40.0	---	mcd	IF=20mA (Note 1)
Luminous Intensity Matching Ratio (Segment To Segment)	Iv-m	---	---	2:1		IF=10mA
Peak Emission Wavelength	λ_p	---	468	---	nm	IF=20mA
Dominant Wavelength	λ_d	---	470	---	nm	IF=20mA (Note 2)
Spectral Line Half-Width	λ	---	25	---	nm	IF=20mA
Forward Voltage	VF	---	6.4	8.0	V	IF=20mA
Reverse Current	IR	---	---	50	μ A	VR=5V

Notes:

1. Luminous intensity is measured with a light sensor and filter combination that approximates the CIE eye-response curve.
2. The dominant wavelength (λ_d) is derived from the CIE chromaticity diagram and represents the single wavelength which defines the color of the device.

Typical Electrical / Optical Characteristics Curves
(25 Ambient Temperature Unless Otherwise Noted)

Please read the following notes before using the datasheets:

1. Over-current-proof

Customer must apply resistors for protection, otherwise slight voltage shift will cause big current change (Burn out will happen).

2. Storage

2.1 If the package contains a moisture proof bag inside, please don't open the package before using.

2.2 Before opening the package, the LEDs should be kept at 30 °C or less and 80%RH or less.

2.3 The LEDs should be used within a year.

2.4 After opening the package, the LEDs should be kept at 30 °C or less and 60%RH or less.

3. Soldering Iron

Each terminal is to go to the tip of soldering iron temperature less than 260 °C for 5 seconds within once in less than the soldering iron capacity 25W. Leave two seconds and more intervals, and do soldering of each terminal. Be careful because the damage of the product is often started at the time of the hand solder.

4. Soldering

When soldering, for Lamp without stopper type and must be leave a minimum of 3mm clearance from the base of the lens to the soldering point.

To avoided the Epoxy climb up on lead frame and was impact to non-soldering problem, dipping the lens into the solder must be avoided.

Do not apply any external stress to the lead frame during soldering while the LED is at high temperature.

Recommended soldering conditions:

Soldering Iron		Wave Soldering	
Temperature	300 °C Max.	Pre-heat	100 °C Max.
Soldering Time	3 sec. Max. (one time only)	Pre-heat Time	60 sec. Max.
		Solder Wave	260 °C Max.
		Soldering Time	5 sec. Max.

Note: Excessive soldering temperature and / or time might result in deformation of the LED lens or catastrophic failure of the LED.

5. Repairing

Repair should not be done after the LEDs have been soldered. When repairing is unavoidable, a double-head soldering iron should be used (as below figure). It should be confirmed beforehand whether the characteristics of the LEDs will or will not be damaged by repairing.

6. Caution in ESD

Static Electricity and surge damages the LED. It is recommended to use a wrist band or anti-electrostatic glove when handling the LED. All devices equipment and machinery must be properly grounded.
