

1W Warm White High Power LED
Technical Data Sheet

Part No.: HP60MW6G

Spec No: HP60M Rev No.: V.3 Date: Jul./10/2007 Page: 1 OF 9

Approved: ZHOU Checked: Wu Drawn: Zhang Lucky Light Electronics Co., Ltd.

## Features:

Small package with high efficiency

Long operating life.

Available in white, warm white.

Typical color temperature: 3000K.

View angle: 135°.

Low voltage DC operated.

The product itself will remain within RoHS compliant Version.

# Applications:

Reading lights (car, bus, aircraft).

Portable (flashlight, bicycle).

Mini\_accent/Uplighters/Downlighters/Orientation.

Bollards/Security/Garden.

Cove/Undershelf/Task.

Automotive rear combination lamps.

Traffic signaling/Beacons/ Rail crossing and Wayside.

Indoor/Outdoor Commercial and Residential Architectural.

Edge\_lit signs (Exit, point of sale).

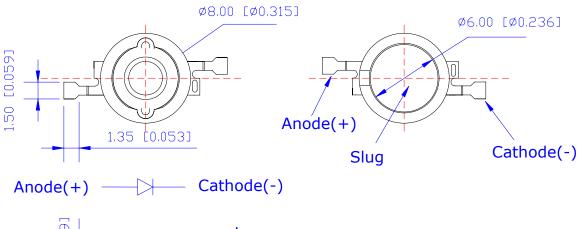

LCD Backlights/Light Guides.

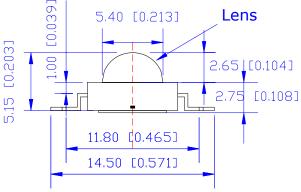

Spec No: HP60M Rev No.: V.3 Date: Jul./10/2007 Page: 2 OF 9
Approved: ZH0U Checked: Wu Drawn: Zhang

# Mechanical Dimensions:

| Part No. | Chip Material | Lens Color      | Source Color |
|----------|---------------|-----------------|--------------|
| HP60MW6G | InGaN         | Yellow Diffused | Warm White   |

#### Notes:

- 1. All dimensions are in millimeters.
- 2. Tolerance is  $\pm$  0.25mm (.010") unless otherwise noted.
- 3. Specifications are subject to change without notice.

Spec No: HP60M Rev No.: V.3 Date: Jul./10/2007 Page: 3 OF 9

Approved: ZHOU Checked: Wu Drawn: Zhang

# Absolute Maximum Ratings at Ta=25

| Parameters   | Symbol | Rating            | Units |
|--|--------|-------------------|-------|
| Power Dissipation  | PD     | 1330 mW           |       |
| Peak Pulse Forward Current<br>(1/10 Duty Cycle, 0.1ms Pulse Width) | IFP    | 500 mA            |       |
| DC Forward Current   | IF     | 350               | mA    |
| Reverse Voltage  | VR     | 5 V               |       |
| Operating Temperature Range  | Topr   | -40 to +80        |       |
| Storage Temperature Range  | Tstg   | -40 to +85        |       |
| Soldering Temperature  | Tsol   | 260 for 5 Seconds |       |

#### Notes:

- 1. It is strongly recommended that the temperature of lead be not higher than 55 .
- 2. Proper current derating must be observed to maintain junction temperature below the maximum.
  - 3. LEDs are not designed to be driven in reserve bias.

## Electrical Optical Characteristics at Ta=25

| Parameters                   | Symbol            | Min. | Тур. | Max. | Unit | Test Condition     |
|------------------------------|-------------------|------|------|------|------|--------------------|
| Luminous Flux [1]            | Ф٧                | 80   | 100  | 120  | lm   | IF=350mA           |
| Viewing Angle [2]            | 2θ <sub>1/2</sub> |      | 135  |      | Deg  | IF=350mA           |
| Chromaticity Coordinates [2] | X                 |      | 0.43 |      |      | IF=350mA           |
| Chromaticity Coordinates [3] | У                 |      | 0.40 |      |      |                    |
| Color Temperature            | ССТ               | 2600 | 3000 | 4000 | K    | IF=350mA           |
| Forward Voltage [4]          | VF                | 2.80 | 3.30 | 3.80 | V    | IF=350mA           |
| Reverse Current              | IR                |      |      | 10   | μΑ   | V <sub>R</sub> =5V |

#### Notes:

- 1. Luminous Intensity Measurement allowance is  $\pm$  10%.
- 2.  $\theta_{1/2}$  is the off-axis angle at which the luminous intensity is half the axial luminous intensity.
- 3. X, Y coordination for white light bin areas refer to EHP-A08 series White and Warm White Binning (DSE-A08-001).
  - 4. Forward Voltage measurement tolerance:  $\pm$  0.10V.

# Reliability Test Items and Conditions:

The reliability of products shall be satisfied with items listed below:

Confidence level: 90%.

LTPD: 10%.

### 1) Test Items and Results:

| No.  | Test Item                             | Test         | Test Conditions                               | Sample | Ac/Re    |
|------|---------------------------------------|--------------|---|--------|----------|
| 110. | rest reem                             | Hours/Cycles | rest conditions                               | Size   | ricy ric |
| 1    | Resistance to<br>Soldering Heat       | 6 Min        | Tsld=260±5 ,<br>Min. 5sec                     | 25pcs  | 0/1      |
| 2    | Thermal Shock                         | 300 Cycles   | H: $+100$ 5min $\int 10$ sec<br>L: $-10$ 5min | 25pcs  | 0/1      |
| 3    | Temperature<br>Cycle                  | 300 Cycles   | H: +100 15min ∫<br>5min<br>L: -40 15min       | 25pcs  | 0/1      |
| 4    | High<br>Temperature<br>Storage        | 1000Hrs.     | Temp: 100                                     | 25pcs  | 0/1      |
| 5    | DC Operating<br>Life                  | 1000Hrs.     | IF=350mA                                      | 25pcs  | 0/1      |
| 6    | Low<br>Temperature<br>Storage         | 1000Hrs.     | Temp: -40                                     | 25pcs  | 0/1      |

## Please read the following notes before using the product:

#### 1. Over-current-proof

Customer must apply resistors for protection, otherwise slight voltage shift will cause big current change (Burn out will happen).

#### 2. Storage

- 2.1 Do not open moisture proof bag before the products are ready to use.
- 2.2 Before opening the package, the LEDs should be kept at 30 or less and 80%RH or less.
- 2.3 The LEDs should be used within a year.
- 2.4 After opening the package, the LEDs should be kept at 30 or less and 60%RH or less.
- 2.5 The LEDs should be used within 168 hours (7 days) after opening the package.
- 2.6 If the moisture adsorbent material has fabled away or the LEDs have exceeded the storage time, baking treatment should be performed using the following conditions. Baking treatment:  $60\pm5$  for 24 hours.

#### 3. Soldering Condition

When soldering, for Lamp without stopper type and must be leave a minimum of 3mm clearance from the base of the lens to the soldering point.

To avoided the Epoxy climb up on lead frame and was impact to non-soldering problem, dipping the lens into the solder must be avoided.

Do not apply any external stress to the lead frame during soldering while the LED is at high temperature.

Recommended soldering conditions:

| Soldering Iron |                 | Wave Soldering |              |  |
|----------------|-----------------|----------------|--------------|--|
| Temperature    | 300 Max.        | Pre-heat       | 100 Max.     |  |
| Soldering Time | 3 sec. Max.     | Pre-heat Time  | 60 sec. Max. |  |
|                | (one time only) | Solder Wave    | 260 Max.     |  |
|                |                 | Soldering Time | 5 sec. Max.  |  |

Note: Excessive soldering temperature and / or time might result in deformation of the LED lens or catastrophic failure of the LED.

#### 4. Soldering Iron

Each terminal is to go to the tip of soldering iron temperature less than 260 for 5 seconds within once in less than the soldering iron capacity 25W. Leave two seconds and more intervals, and do soldering of each terminal. Be careful because the damage of the product is often started at the time of the hand solder.

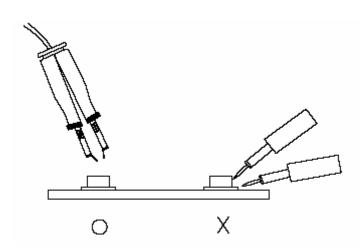

#### 5. Repairing

Repair should not be done after the LEDs have been soldered. When repairing is unavoidable, a double-head soldering iron should be used (as below figure). It should be confirmed beforehand whether the characteristics of the LEDs will or will not be damaged by repairing.

Spec No: HP60M Rev No.: V.3 Date: Jul./10/2007 Page: 8 OF 9

Approved: ZHOU Checked: Wu Drawn: Zhang

#### 6. Caution in ESD

Static Electricity and surge damages the LED. It is recommended to use a wrist band or anti-electrostatic glove when handling the LED. All devices, equipment and machinery must be properly grounded.
